Professional Drone Pilot Course

NV Commission on Postsecondary Education Approved

Start an Amazing & Lucrative Career!

As world technology rapidly evolves, a new market has opened for drone careers in the public and private sector. The objective of this extensive course is to teach students to either begin a career working for these organizations or to open their own freelance businesses. Students for this program will also learn how to film and produce professional videos for multiple industry verticals. Drone maintenance and repair will be covered, in order to insure safe operations both on the ground and in the air. All graduates of this program, that pass the FAA's Part 107 exam, will become commercial drone pilots. Preparation for this exam is covered in detail, as well as the fee for taking the exam at an FAA licensed testing center.

The sky is truly the limit in this field and we welcome the opportunity to prepare our students for a highly successful future as a Licensed FAA Professional Drone Pilot.

Course Modules:

- Preparation for the Part 107 exam
- Drone simulator flight
- Emergency operations
- Aerial Photography & Videography
- Drone flight exercises
- Drone repair
- Drone business, marketing and sales
- Public speaking and business negotiation
- Postproduction for photo and video editing
- And much more

CRI TACTICAL DRONE ACADEMY
